North Carpenter

carp.northe@gmail.com | https://www.linkedin.com/in/north-carpenter | (651)703-6469 | Seattle, WA, 98115, US

Statistics Master's student at the University of Washington with experience using R and Python for data analysis. Former mock trial captain with experience leading teams and presenting complex information in high-pressure settings. Currently building expertise in causal inference, machine learning, and AI to understand complex data.

Education

University of Washington, Seattle, WA | 09/2025 - 03/2027 (expected)
Master of Science Statistics - Advanced Methods and Data Analysis | GPA: 3.66/4.0 | CourseWork: Machine Learning, Applied Linear Regression

Macalester College, Saint Paul, MN | 08/2019 - 05/2023
Bachelor of Arts Economics - Minors: Data Science, Political Science | GPA: 3.80/4.0

Honors: Phi Beta Kappa; 3M Scholar Award (Economics)

Skills

- **Programming and modeling:** R (4 yrs; Tidyverse), Python (1 yr; Pandas, PyTorch, CatBoost), SQL (1 yr); regression, difference-in-differences, causal discovery, experimental design, imputation
- **Tools:** Excel (4 yrs), Google Sheets (5 yrs), GitHub, generative AI coding tools

Relevant Project Experience

The Effect of Hospital Mergers on Quality of Care | *I*ndustrial Organization Capstone | 2023

- Built a reproducible R pipeline to clean, validate, and integrate multi-source data on 3,000 hospitals, and documented data-quality problems such as inconsistent reporting and shell-company ownership changes
- Estimated the effect of acquisitions on wait times and time to CT scan using robust difference-in-differences on 7 years of panel data; checked parallel trends and found no strong evidence of an effect

Cognitive Bias in Uncertain Green Purchasing | Behavioral Economics Capstone | 2023

- Designed a within-subject online experiment in Qualtrics varying price and information reliability, with financial incentives, to test how each affects purchasing decisions
- Analyzed the data with logistic regression: found robust evidence that consumers misjudge the value of unreliable information and weak evidence of non-linear effects; reported failure to replicate

Pedestrian Fatalities: Causal Discovery | Causal Statistics Project | 2026

- Cleaned, merged, and imputed (missRanger) a dataset of 1.1M+ fatal crashes and 140+ variables in R
- Applied the RFCI causal discovery algorithm to build partial ancestral graphs separating confounding from predictive variables

Work Experience

Mathematics Tutor, Classroom Matters, Berkeley, CA | 12/2023 - 08/2025

- Taught AP Statistics and other math classes one-on-one, translating technical concepts into plain terms and improving test scores

Co-Captain, Macalester Mock Trial, Saint Paul, MN | 2021-2023

- Co-led a 10-person team to nationals for the first time in a decade, running meetings and building consensus on arguing case analysis
